

Speciality Lubricants

PRODUCT DATA

WIRE ROPE FIELD DRESSING

DESCRIPTION

Wire Rope field dressing is a dark coloured high melt resilient film to provide long term protection to metal surfaces. On application the volatile carrier solvent rapidly evaporates depositing a film highly resistant to salt water and salt spray. Superior natural wetting properties and its polar physical properties carry the solid lubricant graphite in between the individual wire braids where their mechanical action on the working surfaces protect the the bearing surfaces under high load.

TYPICAL SPECIFICATIONS

- Chain spray.
- Composition High molecular weight petroleum
..... derivative.
..... Solid Lubricant
..... Volatile solvent
..... Inorganic thickener
..... Anti-Corrosion additive
- Service temperature range..... -27°C to 170°C
- Water resistance Excellent
- Density @20°C 0.92
- Flash Point°C 42
- Colour Black

BENEFITS

- Easy penetration of wire rope.
- Does not fling off.
- Extends rope life.
- Out door protection
- Suitable for high load applications.

APPLICATION

- Heavy Duty wire ropes subject to out door working conditions
- Method of application:
Spray brush or wipe on the wire rope and leave enough time for the solvent to evaporate.
